

REACH Management for Chemical Users

1 day seminar

REACH affects all organisations which use chemicals and these companies have specific compliance responsibilities which need to be understood and managed. Downstream users include; formulators, article producers, end users, distributors and engineering firms amongst others.

This course provides an opportunity to understand your obligations and discuss / share experiences with other delegates and a senior chemical industry consultant specialising in REACH. You will understand the implications of REACH and be able to effectively communicate and share the correct information with your suppliers.

The day will keep to a maximum of 12 participants to allow questions and interaction.

Course topics:

- Understanding the role of users in REACH
- Identifying chemical uses
- Regulatory obligations under REACH
- Supply chain communication – up and down stream
- Commercial considerations
- Registration numbers
- CSA and exposure scenarios
- Risk management auditing
- Authorisation / restrictions
- User obligations and options

"After attending this course I'm far more confident of meeting our obligations and meeting our suppliers needs. The facilities were superb and the knowledge of the presenter was excellent."

Cost: £295 per person

Date: Wednesday 15th April 2009
